

COVID-19 Dashboard

LTC Trend Tracker has launched a NEW online web resource that AHCA/NCAL members can access to **find important data related to COVID**, their buildings, and the community. Below are a few key characteristics of this new feature:

- Help operators trend their COVID-19-related performance
- Provide operators with relevant comparative data on COVID-19 that impact operations
- Numerous areas of COVID-19 data available to provide operators a full scope of their community

COVID-19 Vaccination Data

As new variants continue to spread throughout the country, it's important to monitor vaccination rates, including up to date vaccination rates among long term care residents and staff. To help aid in this process, LTC Trend Tracker added two new measures of vaccination data into the COVID-19 dashboard:

1. **Residents Up to Date Vaccination Rate**
2. **Staff Up to Date Vaccination Rate**

These new measures help:

- Operators trend their vaccination rates among residents and staff who have received at least one round of a booster vaccine
- Provide operators with relevant comparative data on up to date vaccination rates within their county, state, and the nation

How do I access both new features?

1. Log in at www.LTCTrendTracker.com
2. Go to the left control panel
3. Click on the “COVID-19 Data” dashboard link that is located at the bottom of the control panel
4. Utilize the “Select Metrics” section to view up to date vaccination data and other available COVID-19 metrics
