

COVID-19 Dashboard

The COVID-19 pandemic has had a profound impact on the nursing home industry with more than 40% of deaths associated with nursing homes. LTC Trend Tracker has launched a NEW online web resource that AHCA/NCAL members can access to find important data related to COVID, their buildings, and the community. Below are a few key characteristics of this new feature:

- Help operators trend their COVID-19-related performance
- Provide operators with relevant comparative data on COVID-19 that impact operations
- Numerous areas of COVID-19 data available to provide operators a full scope of their community

COVID-19 Vaccination Data

As multiple variants continue to spread throughout the country, it's important to monitor vaccination rates among long term care residents and staff. To help aid in this process, LTC Trend Tracker added vaccination data into the COVID-19 dashboard.

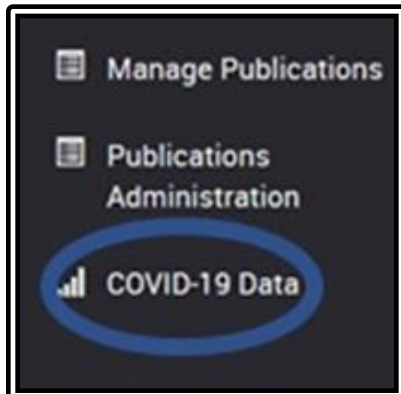

Two measures were added:

1. The percentage of residents fully vaccinated
2. Staff fully vaccinated

This new feature helps:

- Operators trend their vaccination rates among residents and staff
- Provide operators with relevant comparative data on vaccination rates within their county, state, and the nation

How do I access both new features?

1. Go to the left control panel
2. Click on the COVID-19 Data dashboard link that is located at the bottom of the control panel
3. Utilize the "Select Metrics" section to view vaccination data and other available COVID-19 metrics
