LTCC Mission Statement

To provide leadership and guidance to the long term care profession utilizing the member organizations’ collective knowledge, expertise and information resources to improve overall compliance efforts and reduce the overall burden of compliance through collaboration on important initiatives that are common to the profession.

Breach Notification Overview

On August 24, 2009, the Department of Health & Human Services’ Breach Notification for Unsecured Protected Health Information Interim Final Rule (Federal Breach Notification Rule) was published in the Federal Register as required by the American Recovery & Reinvestment Act of 2009. On January 25, 2013, the Final Rule was published to the Federal Register. The federal breach reporting requirements apply to HIPAA covered entities and their business associates. It requires covered entities to notify individuals whose unsecured protected health information (PHI) has been accessed, acquired or disclosed because of a breach, which is defined as “the unauthorized acquisition, access, use or disclosure of PHI.” The rule also outlines a few exceptions to the definition of a breach.

Breaches of PHI are reportable unless covered entities and business associates perform a risk assessment which demonstrates there is a low probability that the PHI has been compromised. After a breach has been discovered, affected residents must be notified of the breach without unreasonable delay and no later than 60 days from the date of discovery. Breaches affecting more than 500 residents must be reported immediately to HHS and the media. Breaches affecting less than 500 residents are logged and reported to HHS on an annual basis. When calculating the number of
affected residents, take into consideration the structure of the organization – all reporting is at the covered entity level.

The rule provides updated guidance specifying the technologies and methodologies that render protected health information (PHI) unusable, unreadable, or indecipherable to unauthorized individuals and therefore not subject to the notification requirements because the information does not meet the “unsecured protected health information” criteria.

Using the Decision Tree and Tools

This document serves as a guide to determine if an incident involves a breach of PHI in a manner that requires notification of the affected residents and what method of notification is required under the federal breach regulation. This document does not address state security breach notification requirements.

Each decision point references additional information on subsequent pages which may be useful throughout the assessment of an incident. You will need to document your assessment process to support your conclusions. Though you may conclude that notification is not required under federal law, you should review any applicable state laws as well as your organization’s policies and procedures to assess whether it is prudent to proceed with notification even though it may not be required.

Sample notification letters to affected residents and the media are available on the LTCC site for your reference.
Incident Assessment

Incident report of potential breach (possible sources include internal, external, BA, etc)

Decision point I-1
Did incident occur on or after 9/23/2009?
  yes
  federal
  no
  state

Decision point I-2
Did incident involve PHI?
  yes
  Notification is not required per the Federal Breach Notification Final Rule.
  no
  Decision point I-3
Did incident involve unsecured PHI?
  yes
  Proceed with notification process
  no

Decision point I-4
Is this a reportable breach?
  yes
  (must review "a" through "c" to determine if breach is reportable)
  no

Decision point I-5
Permitted uses and disclosures

Exceptions to the breach definition

Probability of compromise
Identification of PHI breach which requires federal notification (refer to incident assessment decision tree)

Decision point N-1: Has law enforcement requested a notification delay?  
- Yes: Decision point N-2: What is the method of the request?  
  - Written: Delay notification for the time period specified, then proceed.  
  - Verbal: Delay notification for up to 30 days, then proceed.  
- No: Do not proceed with federal notification.

Decision point N-3: Does urgency exist because of possible imminent misuse?  
- Yes: Provide additional notice, such as by telephone.  
- No: Proceed with federal notification.

Decision point N-4: Is there out of date contact info for 10 or more individuals?  
- Yes: Deliver substitute notice on CE website or media.  
- No: Proceed with federal notification.

Decision point N-5: Did breach involve more than 500 individuals?  
- Yes: Did breach affect more than 500 residents from a state or jurisdiction?  
  - Yes: Provide notice to Secretary HHS via website (insert link).  
  - No: Provide notice to Secretary HHS via website.  
- No: Track incident in breach log.

Decision point N-6: Within 60 days of end of calendar year, deliver notification to Secretary, HHS for breaches discovered during preceding calendar year.

Notification Process

These notifications must be delivered without unreasonable delay and in no case later than 60 days after breach discovery by the covered entity. In some instances, it may be unreasonable to wait 60 days.
The effective date of this rule is September 23, 2009. Notification requirements apply to breaches that occurred on or after September 23, 2009.

The HIPAA Rules define “protected health information” as the individually identifiable health information held or transmitted in any form or medium by HIPAA covered entities and business associates.

Excluded from the definition of PHI is de-identified information as defined in the HIPAA Privacy Rule and listed below:

**De-identified health information:** Health information that does not identify an individual and with respect to which there is no reasonable basis to believe that the information can be used to identify an individual is not individually identifiable health information (see section 164.514(a) or glossary).
Due to the variations in each entity’s environment, no uniform standards exist for secured Protected Health Information. Each covered entity must perform a risk assessment to determine if PHI is secured.

The Final Rule applies to unsecured PHI. The generally accepted definition of secured PHI is PHI that is rendered unusable, unreadable, or indecipherable to unauthorized individuals. Notification is not required for PHI that is considered secure.

The Final Rule contains guidance specifying the technologies and methodologies that render PHI secure. PHI is rendered unusable, unreadable, or indecipherable to unauthorized individuals if one or more of the following applies:

1. Electronic PHI has been encrypted as specified in the HIPAA Security Rule by “the use of a(n)…process to transform data into a form in which there is a low probability of assigning meaning (to the data) without use of a confidential process or key” (45 CFR 164.304 definition of encryption) and such confidential process or key that might enable decryption has not been breached.

To avoid a breach of the confidential process or key, these decryption tools should be stored on a device or at a location separate from the data that they are used to encrypt or decrypt. The encryption processes identified below have been tested by the National Institute of Standards and Technology (NIST) and judged to meet this standard.

These publications were cited as potentially valuable resources, although not required by CMS, for technical personnel having knowledge of the covered entity’s IT environment with specific questions and concerns about securing PHI.

(i) Valid encryption processes for data at rest are consistent with NIST Special Publication 800-111, Guide to Storage Encryption Technologies for End User Devices.

(ii) Valid encryption processes for data in motion are those which comply, as appropriate, with NIST Special Publications 800-52, Guidelines for the Selection and Use of Transport Layer Security (TLS) Implementations; 800-77, Guide to IPsec VPNs; or 800-113, Guide to SSL VPNs, or others which are Federal Information Processing Standards (FIPS) 140-2 validated.

1 (http://www.csrc.nist.gov/)
2. The media on which the PHI is stored or recorded has been destroyed in one of the following ways:

   (i) Paper, film, or other hard copy media have been shredded or destroyed such that the PHI cannot be read or otherwise cannot be reconstructed. Redaction is specifically excluded as a means of destruction.

   (ii) Electronic media have been cleared, purged, or destroyed consistent with NIST Special Publication 800-88, Guidelines for Media Sanitization, such that the PHI cannot be retrieved.

In order for a use or disclosure of resident information to be considered a breach, the acquisition, use or disclosure of the PHI must be in violation of the HIPAA Privacy Rule. Permissible uses and disclosure under the Privacy Rule must fall into one of the categories below.

The following are questions you must ask and answer as you document your efforts in confirming a breach or validating a permissible use or disclosure.

**PERMITTED USES AND DISCLOSURES**

1. Was the PHI accessed, acquired, used or disclosed for treatment, payment or healthcare operations purposes (refer to your notice of privacy practices)?
   
   If No, go to question #2
   
   If Yes, and the purpose was for treatment, it is not a breach.
If Yes, and the purpose was for payment or healthcare operations, was the PHI the minimum necessary amount for the given task?

If Yes, it is not a breach.

If No, go to the section **Probability of Compromise**.

2. Was the PHI acquired, used or disclosed incidental to a permitted use or disclosure?

In order for a use or disclosure to be considered incidental, it must be related to a use or disclosure that is either permitted or required under the Privacy Rule and the amount of information must have been the minimum necessary for the intended purpose and reasonable safeguards must have been taken to keep the information confidential. For example, the following practices are permissible under the Privacy Rule, if reasonable precautions were taken to minimize the chance of incidental disclosures to others who may be nearby:

   a. Health care staff may orally coordinate services at nursing stations.
   b. Nurses or other health care professionals may discuss a resident’s condition over the phone with a provider or legal representative.
   c. A health care professional may discuss lab test results with a resident or other provider in a joint treatment area.
   d. A physician may discuss a residents’ condition or treatment regimen in the resident’s semi-private room.

If Yes, it is not a breach.

If No, go to question 3.

3. Was the PHI disclosed pursuant to and in compliance with a HIPAA-compliant authorization?

If Yes, it is not a breach.

If No, go to question 4.

4. Was the PHI accessed, acquired, used or disclosed for facility directory purposes in compliance with 164.510(a)?

If Yes, it is not a breach.

If No, go to question 5.

5. Was the PHI accessed, acquired, used or disclosed for involvement in the resident’s care and notification purposes in compliance with 164.510(b)?
If Yes, it is not a breach.

If No, go to question 6.

6. Was the PHI accessed, acquired, used or disclosed pursuant to 164.512 uses and disclosures for which an authorization or opportunity to agree or object is not required? Was it:
   a. required by law,
   b. for public health activities,
   c. about victims of abuse, neglect or domestic violence,
   d. for health oversight activities,
   e. for judicial and administrative proceedings,
   f. for law enforcement purposes,
   g. about decedents,
   h. for cadaveric organ, eye or tissue donation purposes,
   i. for research purposes,
   j. to avert a serious threat to health or safety,
   k. for specialized government functions, OR
   l. for workers’ compensation purposes, AND
   m. in compliance with the requirements outlined in 164.512?

If Yes, it is not a breach.

If No, go to question 7.

**EXCEPTIONS TO THE BREACH DEFINITION**

Corresponds to Section 1 of Breach Risk Tool

Does the impermissible access, acquisition, use or disclosure fall under one of the following exceptions?

7. Was it an incidental access, use or disclosure by a workforce member of the covered entity or business associate:
   a. While acting under the organization’s authority, and
   b. Made in good faith, and
   c. Within their scope of authority, and
   d. Does not result in a further use or disclosure?
      i. For example, a billing employee receives and opens an e-mail containing protected health information about a patient which a nurse mistakenly sent to the billing employee. The billing employee notices that he is not the intended recipient, alerts the nurse of the misdirected e-mail, and then deletes it. The billing employee unintentionally accessed protected health information to which he was not authorized to have access. However, the billing employee’s
use of the information was done in good faith and within the scope of authority, and therefore, would not constitute a breach and notification would not be required, provided the employee did not further use or disclose the information accessed in a manner not permitted by the Privacy Rule.

If Yes, there is no breach.

If No, go to question 8.

8. Was it an inadvertent disclosure:
   a. By a person who is authorized to access protected health information at a covered entity or business associate,
   b. To another person authorized to access protected health information at the same covered entity or business associate, or organized health care arrangement in which the covered entity participates, and
   c. The information received as a result of such disclosure is not further used or disclosed in a manner not permitted by the Privacy Rule?
      i. For example, a nurse calls a doctor who provides medical information on a resident in response to the inquiry. It turns out the information was for the wrong resident and the information was not further used or disclosed by the doctor.

If Yes, there is no breach.

If No, go to question 9.

9. Was it a disclosure of protected health information where a covered entity or business associate has a good faith belief that an unauthorized person to whom the disclosure was made would not reasonably have been able to retain such information?
   i. For example, a medical records' clerk hands a resident a copy of a medical record, but quickly realizes that it was another resident’s record and requests the return of the record. In this case, if the medical records clerk can reasonably conclude that the resident could not have read or otherwise retained the information, then providing the medical record to the wrong resident does not constitute a breach.

If Yes, there is no breach.

If No, proceed to question 10.
Corresponds to Section 2 of Breach Risk Tool

10. Was the PHI accessed, acquired, used or disclosed by another entity governed by the HIPAA Privacy and Security Rules or a Federal Agency obligated to comply with the Privacy Act of 1974 and Federal Information Security Management Act (FISMA) of 2002?

If Yes, were immediate steps taken to mitigate the impermissible use/disclosure/acquisition? For example:

a. Was the recipient contacted and were satisfactory assurances obtained assuring that the PHI would not be further used or disclosed or would be destroyed? Or
b. Was the PHI not accessed, opened, altered, transferred or otherwise compromised? For example, a mailing is returned unopened or through analysis it is determined that information on a laptop or computer was not accessed.

If Yes, the probability of compromise is low.

If No, go to question 11.

11. Do the circumstances of the PHI disclosure result in a low probability of compromise?

a. What is the nature and extent of the protected health information involved, including the types of identifiers and the likelihood of re-identification?
   i. Only minimal PHI acquired, accessed, used or disclosed such as just the patient name and the fact that services were received?
   ii. Did the PHI include the resident’s name and type of services received? For example: were services from a specialized facility such as an infectious disease clinic or substance abuse provider?
   iii. Did the PHI include high risk information that could be used for identity theft such as name, social security number, date of birth, financial or credit card account numbers, driver's license number or state-issued identification card number or maiden name?
   iv. Did the PHI include only a limited data set as defined by the Privacy Rule and the likelihood of re-identification is low? For example, if the information included the zip code for a metropolitan city vs. a rural location.

b. Who was the unauthorized person who used the protected health information or to whom the disclosure was made?

c. Was the protected health information actually acquired or viewed?

d. What is the extent to which the risk to the protected health information has been mitigated?
If the circumstances of the PHI disclosure indicate there is a low probability of compromise, no breach has occurred. Otherwise, there is a breach. Proceed with notification.

Continue the investigation and document your decision.
Notification Process Decision Points

Has law enforcement requested a notification delay?

If a law enforcement official states to a covered entity or business associate that a notification, notice, or posting would impede a criminal investigation, or cause damage to national security, notification should be delayed. See decision point N-2 to determine the length of the delay.

What is the method of the request?

Law enforcement requests are accepted in two formats: written statement or oral statement. If the type of request is oral, the covered entity should delay notification for a period of up to 30 days, then proceed with the notification process. If the request is written, the request should specify a time frame for the delay. The covered entity should honor the request and delay notice as specified.
In any case deemed by the covered entity to require urgency because of possible imminent misuse of unsecured PHI, the covered entity may provide information to individuals by telephone or other means, as appropriate, in addition to the standard notice.

In the case where there is insufficient or out-of-date contact information for ten or more affected individuals, a substitute notice is required. This substitute notice must be provided in the form of a media announcement or conspicuous posting for a period of 90 days on the covered entity’s web site home page.

Based upon the number of individuals affected by the breach, additional notice may be required. If a breach affects 500 or more residents, a covered entity must provide the Secretary with notice of the breach without unreasonable delay and in no case later than 60 days from discovery of the breach. If the breach affects more than 500 residents from a state or jurisdiction, see decision point N-6.
Where a breach affects more than 500 residents from a state or jurisdiction, additional notice is required. In that case, the covered entity shall notify prominent media outlets serving the state or jurisdiction. This media notice is in addition to, not a substitute for, individual notice. Notification to prominent media outlets should occur without unreasonable delay and in no case later than 60 calendar days after discovery of the breach.
